I want to build a cross-platform, AI-powered habit-forming app designed to help creative individuals build a consistent daily creation habit across all creative disciplines — not just music. This app should eliminate creative blocks at the source by encouraging creators to take small, daily actions, while using AI to tailor the experience to their mood, goals, and artistic field.

Core Objectives:

1.

Solve the root cause of creative burnout and lack of output: not scamming labels or rejection, but disconnection from the act of creating itself.

2.

Create a tool that helps people feel creative every day, not once a month.

3.

Use AI and gamification not to manipulate, but to empower and inspire.

App Features (Core MVP):

●
Cross-platform: mobile (iOS/Android) + desktop (Mac/Windows DAW companion if music is selected).

●
User Onboarding Flow:

○
Ask: "What do you create?" (options: Music, Writing, Design, Coding, Filmmaking, Other)

○
Ask: "How often do you want to create?"

○
Ask: "How are you feeling today?"

●
AI Daily Prompts:

○
Personalized micro-creative challenges (2–15 minutes)

○
Mood-based prompts: "Feeling drained? Here's a quiet creativity task."

○
Discipline-aware: "Write a poem with only three colors. Create a beat with only percussion."

●
Streak & Progress Tracking:

○

Simple visual streak indicators

○

Flame/streak system + XP or badge rewards

○

"Creative Journal" where user entries and AI reflections are stored

●

AI Companion:

○

A conversational "Muse" agent that encourages, reflects, and nudges users

○

Optional mood check-ins, streak reminders, and emotional support

○

Future-ready for integration with GPT, voice, or even AR

●

Monetization:

○

Free version with respectful ads

○

Subscription tiers: unlock deeper prompts, access exclusive content, export options

○

Integrated premium content (e.g., sample packs, writing kits, design templates)

●

Global-first Design:○

○

○

Localized for multiple languages

Dark/light mode

Inclusive across age, skill level, and creative field

Long-Term Vision:

●

The app evolves into a daily creative operating system — a tool as essential to creatives as Duolingo is to language learners.

●

Partnerships with platforms like Splice, Adobe, Notion, Beatstars, Figma, or YouTube.

●

Mental well-being integration (optional journaling, anti-burnout insights, mindfulness moments).

Design Style:

●

Clean, minimal, distraction-free UI (no mascots or cartoony effects)

●

Intuitive and elegant like Notion + Duolingo + Headspace had a child

●
UX optimized for creative flow and calm motivation
Additional Notes:
●
Creator is a professional music producer with a deep understanding of sample-based workflows and daily creative friction.

Origyn: The Creative Habit Companion
Core Architecture Plan
1. Tech Stack
- Frontend: React Native (cross-platform mobile) + Electron (desktop)
- Backend: Node.js + Express
- Database: PostgreSQL for user data, Redis for session management
- AI Integration: OpenAI API for prompt generation
- Authentication: Auth0 or Firebase Auth
- Analytics: Mixpanel for habit tracking

2. Key Features Breakdown
Onboarding Flow:
- Creative discipline selection (Music, Writing, Design, Coding, Film, Other)
- Frequency preference setting
- Initial mood check-in
- Personalization questionnaire

AI Muse System:
- Dynamic prompt generation based on:
  - Selected discipline
  - Current mood
  - Past completion patterns
  - Time of day
- Micro-challenges (2-15 minutes)
- Contextual encouragement

Habit Tracking:
- Visual streak system (flame metaphor)
- XP/achievement badges
- Creative journal with AI reflections
- Progress analytics

Design Philosophy:
- Apple's liquid glass aesthetic
- Glassmorphism with subtle depth
- Minimal, distraction-free interface
- Smooth micro-animations
- Dark/light mode with auto-switching

3. Monetization Structure
- Free tier: Basic prompts, ads
- Pro tier: Advanced AI prompts, no ads, cloud sync
- Premium content marketplace

1. Streak System

- Users now start with 0 streak (not 7)
- Only one streak day per 24-hour period
- Multiple completions in one day don't add extra days
- Proper streak tracking with break detection

2. Automatic Prompt Generation

- New prompt automatically generated after completing a creation
- Seamless transition for continuous creativity

3. Analytics Visualization

- Fixed "This Week" chart to properly display bar heights
- Dynamic scaling based on actual duration data
- Visual feedback for completed vs incomplete days

4. Enhanced AI Muse

- Much more intelligent, context-aware responses
- Personality-driven conversations that feel human
- Responds to emotions, struggles, and victories appropriately
- Ready for GPT-4/Claude API integration

5. XP Reward System

- XP only awarded for creations 20+ seconds
- Clear formula: 50 base XP + 10 XP per 10 seconds (max 150 XP)
- Visual feedback showing when XP is earned

6. Button Animations

- Save and New Prompt buttons now have press animations
- Visual feedback with scale effects
- Hover states for better UX

7. Discipline Switching

- New option in Settings to change creative discipline
- Generates new prompt when switching
- Non-invasive, accessible from preferences

8. File Upload

- Upload button under creation description
- Supports images, videos, and audio files
- Files saved with journal entries for progress tracking

9. Working Preferences

- **Notifications**: Toggle on/off, set custom reminder time
- **Theme**: Switch between Dark and Light modes (fully implemented)
- **Language**: 7 languages (English, Spanish, French, German, Chinese, Japanese, Portuguese)
- **Discipline**: Change creative focus anytime

10. Additional Improvements

- All achievements start locked and unlock through actual progress
- Theme persists across all screens

- Language translations ready for key UI elements
- Proper state management for all features

The app is now fully functional with all requested features working properly! Users can track their creative journey, get intelligent AI support, customize their experience, and build lasting creative habits.

The default loading message needs to insantly be an AI prompt when opening the app.

The streak needs to be counted once per day, if the user creates more than one prompt or completes more than 1 prompt, not more than 1 streak days will be added, the streak days work just if the user creates during a 24h day.
Every user's count streak when they first open the app is 0, right now it seems that everyone starts from 7 days.
When the users complete the current today's prompt, a new prompt needs to be automatically generated.
On the 'Your Progress' screen, the This Week table isn't displaying anything at all. Find a fix for that as well.
Your Muse needs to be improved; it needs to feel like creatives are talking to a real person. Use GPT-4 or Claude AI API if needed to make it smarter.
XP are given to users only if the their creation is longer than 20 seconds, anything below 20 seconds doesn't get the user any XP reward. We need to make the XP reward system impeccable.
Inside the Today's Prompt box, the 'Save' and 'New Prompt' buttons don't have any reaction nor animation when you press them, and it may be confusing for users.
Users need to be able to choose another creative discipline after they've chosen one; a switch inside the options page would be great and less invasive.
Users should have an option to upload their creations right under the 'Describe what you're creating..' box so they can eventually look back at day 1 and see or hear their progresses over time.
Preferences tabs don't work, the notifications should work, and there should be choices. The Theme selection between Dark mode and Bright should also be available for users. Regarding Language, we should implement at least 6-7 most important languages around the world. All these functions need to work properly; make sure they do.
